

BERT'S SHEET METAL PRODUCTS QF-003 · INTERNAL AUDIT CHECKLIST

Controlled form under Quality Manual QM-001, Section 16 (Internal Audit) · Rev A · August 13, 2026. Perform at least annually. Result codes: OK · NC (nonconformance — enter in findings log) · NA (not applicable, note why).

Audit date:		Auditor:	
Period covered:		Previous audit date:	

Part 1 — Order Trace-Through (sample 3 completed orders)

Pick three orders shipped during the period — at least one with a first article and one that had an NCR, if available. Work each column top to bottom in the apps; every check is a record you should be able to open and see.

	Order 1	Order 2	Order 3
PO # / part #			
Quote exists in the Quote app with the customer drawing attached			
Customer PO reviewed against quote (P/N, rev, qty, price, due date)			
Order confirmation emailed to the customer from the system			
Order record / traveler complete: P/N, rev, qty, routing notes, due date			
Correct drawing revision attached to the order (matches the PO)			
Material purchased from an approved vendor via the PO pipeline			
Material cert on file in Material Certs, linked to the job (if cert required)			
Start Inspection opened with first-piece photos			
Self-checks recorded during the run			
First article approved by a manager before the run (if FAIR required)			
Any flagged part has a linked NCR with disposition recorded			
No open NCR at time of shipment			
Order shows delivered / invoiced status consistent with what shipped			

Part 2 — Nonconformance and Corrective Action Review

Check	Result (OK / NC / NA)	Notes / evidence
All NCRs from the period reviewed: each has part, qty affected, description, and raised-by		
Every closed NCR has a disposition (rework / scrap / use-as-is) and corrective action recorded		
Use-as-is dispositions have customer approval on file		
Open NCRs: none stalled without an owner; aging is reasonable		
Repeat problems checked: same part or same cause appearing in more than one NCR — if so, log a finding		

Part 3 — Purchasing and Supplier Control

Check	Result (OK / NC / NA)	Notes / evidence
Approved vendor list is current; recent POs sampled were placed with listed vendors		
Sampled POs went through need → issue → receive; received items checked against the PO		

Vendor quality problems from the period were recorded against the vendor		
--	--	--

Part 4 — Calibration (QF-001)

Check	Result (OK / NC / NA)	Notes / evidence
Calibration register is current: every acceptance tool in use appears on it		
No tool in use is past its due date		
Certificates on file for outside calibrations; certs state N.I.S.T. traceability		
Any OOT finding during the period triggered review of product accepted with that tool		

Part 5 — Training (QF-002)

Check	Result (OK / NC / NA)	Notes / evidence
A training record exists for each current employee		
Topics initialed match what the employee actually does (spot-check one operator, one manager)		
System roles match: operators on ops accounts, managers on ofc accounts		

Part 6 — Documents, Records, and System

Check	Result (OK / NC / NA)	Notes / evidence
Quality Manual QM-001 is at the current revision; changes during the period were approved		
Spot-check three active jobs: drawing attached is the current customer revision		
QC audit log spot-checked: inspections and NCR actions carry correct user and timestamp		
A database backup was exported during the period and is retrievable		

Findings Log

Enter every NC result and any observation worth tracking. A finding is closed when the action is done and verified effective — not when it is assigned.
